Liquid Fence® Co., Inc.
365 Industrial Park Dr.,
Mt. Pocono, PA 18344

For Low-Growing:
Ornamental Landscaping Beds, Ground Cover and Turf

Rain Resistant • 100% Guaranteed • #1 Selling Deer & Rabbit Repellent

MADE IN THE
USA

Directions: To keep contents fresh, be sure to close bag tightly with closure and close box after use.

Apply **Liquid Fence® Deer & Rabbit Repellent Granular** evenly on and around low-growing ornamental landscaping beds, ground cover and turf. Vegetation will be protected up to 24 inches in height. Reapply every three to four weeks or after excessive rainfall. In areas where feeding pressure from deer and rabbits is intense, additional and/or more liberal applications may be needed.

Spreader Application: Apply 1 pound of product per 500 square feet, using either drop, broadcast or rotary spreader.

How it works...

Homeowners, gardeners, professional landscapers and commercial growers have discovered **Liquid Fence** stops deer and rabbit damage – NATURALLY!

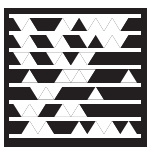

Unlike other deer and rabbit repellents that require the animals to browse to be effective, **Liquid Fence** works on scent, so deer and rabbits don't even have to take a bite to be repelled. Because the animals' natural aversion to this scent will never diminish, **Liquid Fence** DOES NOT have to be rotated with other repellent brands.

For protection of vegetation above the height of 24 inches, we recommend using **Liquid Fence® Deer & Rabbit Repellent liquid**.

Instrucciones: Para mantener el contenido fresco, asegúrese de cerrar la bolsa firmemente con el cierre y cierre la caja después del uso. Aplique el **repelente granular de venados y conejos Liquid Fence®** de forma uniforme sobre y alrededor de macizos ornamentales de crecimiento lento de paisajismo, cubiertas de suelo y césped. Las plantas estarán protegidas hasta alcanzar los 60,96 cm de alto. Vuelva a aplicar cada tres a cuatro semanas o después de lluvias intensas. En áreas en donde los venados y los conejos se alimentan de forma intensa, es posible que se necesiten aplicaciones más generosas o adicionales. No aplique sobre cultivos comestibles por encima del suelo inmediatamente antes de cosechar.

Aplicación con esparcidor: Aplique 9,76 gramos del producto por metro cuadrado, usando un esparcidor giratorio, por voleo o por dispersión.
