

MASTER FEEDING SCHEDULE

Aurora Innovations master feeding schedule will help you get the best quality and flavors out of your plants while also getting record breaking yields. The master feeding program begins with adding 2 to 3 inches of coco fiber as a mulch to prevent soil compaction and allow for more even drying of the soil. Apply liquid nutrients at about 5 ml per product with each feeding. Apply dry nutrients and worm castings on top of the coco periodically, in amounts based on container size, according to the attached charts. Once your plants start to grow rapidly, we recommend feeding with liquid nutrients at every watering until the final week of flush with water. We recommend using Oregonism XL and also adding more coco fiber each time you transplant.

CONVERSION CHART

5 ML	1 TSP
3 TSP	1 TBS
1 TBS	15 ML
30 ML	1 OZ
8 OZ	1 CUP
5 ML / GAL	APPROX 750:1 DILUTION
15 ML / GAL	APPROX 250:1 DILUTION

When introducing a new fertilizer to your program, start slow and increase levels gradually to insure compatability and avoid fertilizer excess. If you don't notice benefits in your harvest from any product you are using, whether ours or another company's, then don't use it.
