| SECTION 11. | POTENTIAL HEALTH EFFECTS |
|-------------|--------------------------|

Acute Effects:

Eyes: May cause slight eye irritation.

Skin: Prolonged exposure is not likely to cause significant skin irritation. A single prolonged exposure is not likely to result in the material being absorbed through skin in harmful amounts. Did not cause allergic skin reactions when tested with guinea pigs. LD₅₀ (Rabbits) > 5000 mg/kg.

Ingestion: Single dose oral toxicity is extremely low. The oral LD₅₀ for rats and mice is > 5000 mg/kg. No hazards anticipated from swallowing small amounts incidental to normal handling operations.

Inhalation: Single exposure to concentrate mist is not likely to cause adverse effects.

Systemic (Other Target Organ) Effects: In animals, has been shown to cause vacuolation of cells in various tissues and changes in blood and serum biochemistry. Dose levels producing these effects were many times higher than any dose levels expected from exposure due to use.

Cancer Information: For Spinosad, laboratory animal studies were negative.

Teratotoxicology: Spinosad did not cause birth defects in laboratory animals.

Reproductive Effects: For Spinosad, in laboratory animal studies, effects on reproduction have been seen only at doses that produced significant toxicity to the parent animals.
